WinControl® XL Plus

Fully-featured, hassle-free
facilities management software.

KMC
CONTROLS

Now facility managers can easily and conveniently control their KMC building automation systems with WinControl™ XL Plus. This powerful 32-bit program doubles as both the operating environment and a powerful programming tool for configuring, operating, monitoring, and adjusting, the most complex systems. WinControl XL Plus is designed for all Tier 1 and Tier 2 controllers and devices in the KMC digital product line. It offers the design time-savings of a complete graphics library including animated graphics and complete animation control. WinControl XL Plus—a full-featured and intuitive window into the power, speed, flexibility and control that only KMC digital products can offer.

WinControl XL Plus provides more control with less effort. This userfriendly software features a seamless interface that gives operators greater power, speed, flexibility, and reliability to manage today's complex facilities. The user can customize the menu-driven program and active graphic screens to match the precise control requirements of their facility. Graphic windows vividly recreate each process in the system so that all parameters can be viewed or changed as needed directly on the graphic screen. Operators have complete control of start-stop scheduling, overrides, status, temperature, humidity, alarms, trend logs, runtime logs, and many other functions. Animated graphics and special messaging features enhance presentation of information for a higher level of user-friendliness.

Based on the popular Windows® platform, WinControl XL Plus is a versatile, easy-to-use control program that greatly simplifies the control management process with features such as 64 million colors, scalable True Type fonts, bitmap data images, deluxe graphics libraries, and Excel® export. Multiple graphic windows can manage up to 160 parameters per window and even display up to 32 system graphic windows at one time on one monitor. This means up to 5,120 parameters can be viewed in a single display. Alarm messages, as well as data logging, are also displayed for ready examination.

The interactive capabilities of the Windows® platform allow multiple software to run simultaneously to meet the most demanding system requirements and make system maintenance completely user-friendly.

Key Features

System Access
- Equal access to all controllers on local Ethernet network or modem
- Customized user access
- Multiple access levels

Network Wide Operations
- Network status
- Manual/override points logs
- Report generation
- Save routines

Historical Data Archiving
- Long-term storage of selected data
- Easy export of all stored data to XLS, CSV, or HTM

Data Point Editor
- Full system setup and programming of all data points

Animated Graphics
- Use built-in animated gifs or import your own
- Full control of animated digital or analog points

Deluxe Graphics Library
- 3D components
- AHU, FCU, chiller, boiler, rooftop, & more
- Gif images

Drag and Drop Programming
- Eases system group programming
- Locate using explorer-like display
- Click on point, drag to system group location, and drop in place

Panel File Export
- Reduces time for as-built documentation
- View controllers offline
- Two formats including CSV and HTML formatted files

Special Messaging
- Call-out voice messages
- Text paging
- Numeric paging
